Following a multi-million dollar acquisition, Scottish-based gas turbine specialist Alba Power has significantly enhanced its stocks of Rolls-Royce Avon 1534 and 1535 gas turbines, spare parts, components, consumables and service tooling.

The purchase was made from GE Energy (Norway) A.S., and saw the stocks shipped from GE Energy's premises in Agotnes, near Bergen, to Alba Power's custom-built gas turbine workshop facilities near Aberdeen, Scotland.

"This latest major investment in Avon gas turbines and spare parts underpins our commitment to provide long-term repair, maintenance and supply services to the international industrial market," said Terry Alderton, managing director of Alba Power.

"As with all our stock-holding, all gas turbines, spare parts, consumables and components are supplied with full service history, traceability and certificate of conformity as appropriate."

World's largest stock

Even before this latest investment, Alba Power already held the world's largest stock – over one million line items – of Rolls-Royce Avon and Olympus gas turbines and spare parts, market-ready for early exchange, lease or sale as required.

"We believe Alba Power is now uniquely well-placed to optimise the recycling and revitalisation of fully overhauled gas turbines and components," says Terry Alderton.

"In this way, we can offer turbine owners a sustainable long-term support and maintenance service which can greatly extend the working life of their turbine fleets."

"Customer feedback confirms that Alba power is widely recognised as offering a world-class, friendly, cost-effective and highly responsive international gas turbine support service."
